

IN THE CLAIMS:

This listing of claims will replace all prior versions and listing of claims in the application.

Listing of Claims:

1. (Previously presented) A method in a data processing system for pruning search engine indices, the method comprising:
receiving a notification by a search engine from a client browser that a Web page retrieval error occurred for a Web page or that the Web page no longer contains selected keywords; and
automatically deleting the Web page from the search engine indices in response to receiving the notification.
2. (Original) The method of claim 1, wherein the step of automatically deleting is initiated if the notification results in a minimum number of notifications being received for the Web page.
3. (Original) The method of claim 1 further comprising:
receiving a search request from the client browser, wherein the search request contains the selected keywords;
searching the search engine indices for matches to the selected keywords to form a search; and
sending a result of the search to the client browser.
4. (Original) The method of claim 3, wherein the result includes an indication that the data processing system includes a search engine to cause the client browser to send the notification to the data processing system.

5. (Original) The method of claim 4, wherein the search request includes other keywords in addition to the selected keywords.
6. (Original) The method of claim 1, wherein the retrieval error indicates that the Web page is absent.
7. (Original) The method of claim 1, wherein the method is located in one of a search engine or a Web portal.
8. (Previously presented) A method in a data processing system for managing entries in a Web page database, the method comprising:
 - receiving a notification by a search engine from a client browser that a retrieval error occurred for a Web page; and
 - automatically deleting an entry associated with the Web page from the Web page database in response to receiving the notification.
9. (Original) The method of claim 8, wherein the step of automatically deleting the entry occurs only if the notification causes a number of notifications received for the entry to exceed a threshold value.
10. (Original) The method of claim 8 further comprising:
 - receiving a search request from the client browser;
 - searching the Web page database for matches to the request to generate a result;
 - and
 - sending the result generated from searching the Web page database to the client browser, wherein the result includes an indicator that the data processing system includes a search engine to cause the client browser to return the notification.
11. (Original) The method of claim 8, wherein the notification is a first type of notification and further comprising:

receiving a second type of notification from a client browser that at least one selected search term is absent from the Web page; and
automatically deleting an entry associated with the Web page from the Web page database in response to receiving the second type of notification.

12. (Original) The method of claim 8, wherein the method is located in one of a search engine or a Web portal.

13. (Canceled)

14. (Canceled)

15. (Canceled)

16. (Previously presented) A method in a data processing system for managing a set of bookmarks for a browser, the method comprising:

 sending a request for a Web page in response to a selection of a bookmark from the set of bookmarks, wherein the bookmark is associated with the Web page;
 determining whether an error has occurred in retrieving the Web page; and
 removing the bookmark in response to determining that an error has occurred in retrieving the Web page.

17. (Previously presented) The method of claim 16, wherein determining whether an error has occurred comprises:

 determining whether the error has occurred more than a selected number of times;
and wherein removing the bookmark comprises:
 removing the bookmark from the set of bookmarks in response to determining that the error has occurred more than the selected number of times.

18. (Previously presented) The method of claim 16, wherein removing the bookmark comprises:

automatically removing the bookmark in response to determining that an error has occurred in retrieving the Web page.

19. (Previously presented) The method of claim 16, wherein removing the bookmark comprises:

removing the bookmark in response to a user input to remove the bookmark.

20. (Previously presented) A data processing system for pruning search engine indices, the data processing system comprising:

a bus system;

a communications unit connected to the bus system;

a memory connected to the bus system, wherein the memory includes a set of instructions; and

a processing unit connected to the bus system, wherein the processing unit executes the set of instructions to receive a notification by a search engine from a client browser that a Web page retrieval error occurred for a Web page or that the Web page no longer contains selected keywords; and automatically delete the Web page from the search engine indices in response to receiving the notification.

21. (Previously presented) A data processing system for managing entries in a Web page database, the data processing system comprising:

a bus system;

a communications unit connected to the bus system;

a memory connected to the bus system, wherein the memory includes as a set of instructions; and

a processing unit connected to the bus system, wherein the processing unit executes the set of instructions to receive a notification by a search engine from a client browser that a retrieval error occurred for a Web page; and automatically delete an entry associated with the Web page from the Web page database in response to receiving the notification.

22. (Canceled)

23. (Previously presented) A data processing system for managing a set of bookmarks for a browser, the data processing system comprising:

a bus system;

a communications unit connected to the bus system;

a memory connected to the bus system, wherein the memory includes a set of instructions; and

a processing unit connected to the bus system, wherein the processing unit executes the set of instructions to send a request for a Web page in response to a selection of a bookmark from the set of bookmarks in which the bookmark is associated with the Web page and removes the bookmark in response to determining that an error has occurred in retrieving the Web page.

24. (Currently amended) A data processing system for pruning search engine indices, the data processing system comprising:

[[First]] first means for receiving a notification from a client browser that a Web page retrieval error occurred for a Web page or that the Web page no longer contains selected keywords; and

deleting means for automatically deleting the Web page from the search engine indices in response to receiving the notification.

25. (Original) The data processing system of claim 24, wherein the means of automatically deleting is initiated if the notification results in a minimum number of notifications being received for the Web page.

26. (Original) The data processing system of claim 24 wherein the receiving means is a first receiving means further comprising:

second receiving means for receiving a search request from the client browser, wherein the search request contains the selected keywords;

searching means for searching the search engine indices for matches to the selected keywords to form a search; and

sending means for sending a result of the search to the client browser.

27. (Original) The data processing system of claim 26, wherein the result includes an indication that the data processing system includes a search engine to cause the client browser to send the notification to the data processing system.

28. (Original) The data processing system of claim 27, wherein the search request includes other keywords in addition to the selected keywords.

29. (Original) The data processing system of claim 24, wherein the retrieval error indicates that the Web page is absent.

30. (Original) The data processing system of claim 24, wherein the data processing system is located in one of a search engine or a Web portal.

31. (Original) A data processing system for managing entries in a Web page database, the data processing system comprising:

receiving means for receiving a notification from a client browser that a retrieval error occurred for a Web page; and

deleting means for automatically deleting an entry associated with the Web page from the Web page database in response to receiving the notification.

32. (Original) The data processing system of claim 31, wherein the deleting means is initiated only if the notification causes a number of notifications received for the entry to exceed a threshold value.

33. (Original) The data processing system of claim 31 further comprising:
receiving means for receiving a search request from the client browser;

searching means for searching the Web page database for matches to the request to generate a result; and

sending means for sending the result generated from searching the Web page database to the client browser, wherein the result includes an indicator that the data processing system includes a search engine to cause the client browser to return the notification.

34. (Original) The data processing system of claim 31, wherein the notification is a first type of notification and the receiving means is a first receiving means and further comprising:

second receiving means for receiving a second type of notification from a client browser that at least one selected search term is absent from the Web page; and

deleting means for automatically deleting an entry associated with the Web page from the Web page database in response to receiving the second type of notification.

35. (Original) The data processing system of claim 31, wherein the receiving means and the deleting means are located in one of a search engine or a Web portal.

36. (Canceled)

37. (Canceled)

38. (Canceled)

39. (Previously presented) A data processing system for managing a set of bookmarks for a browser, the data processing system comprising:

sending means for sending a request for a Web page in response to a selection of a bookmark from the set of bookmarks, wherein the bookmark is associated with the Web page;

determining means for determining whether an error has occurred in retrieving the Web page; and

removing means for removing the bookmark in response to determining that an error has occurred in retrieving the Web page.

40. (Previously presented) The data processing system of claim 39, wherein the determining means comprises:

determining means for determining whether the error has occurred more than a selected number of times; and

wherein the removing means comprises:

removing means for removing the bookmark from the set of bookmarks in response to determining that the error has occurred more than the selected number of times.

41. (Previously presented) The data processing system of claim 40, wherein the removing means comprises:

generating means for generating a user prompt to remove the bookmark in response to determining that the error has occurred more than the selected number of times.

42. (Previously presented) The data processing system of claim 41, wherein the removing means comprises:

removing means for removing the bookmark in response to a user input to remove the bookmark.

43. (Previously presented) A computer program product in a computer readable medium for pruning search engine indices, the computer program product comprising:

first instructions for receiving by a search engine a notification from a client browser that a Web page retrieval error occurred for a Web page or that the Web page no longer contains selected keywords; and

second instructions for automatically deleting the Web page from the search engine indices in response to receiving the notification.

44. (Previously presented) A computer program product in a computer readable medium for managing entries in a Web page database, the computer program product comprising:

first instructions for receiving by a search engine a notification from a client browser that a retrieval error occurred for a Web page; and
second instructions for automatically deleting an entry associated with the Web page from the Web page database in response to receiving the notification.

45. (Canceled)

46. (Previously presented) A computer program product in a computer readable medium for managing a set of bookmarks for a browser, the computer program product comprising:

first instructions for sending a request for a Web page in response to a selection of a bookmark from the set of bookmarks, wherein the bookmark is associated with the Web page;

second instructions for determining whether an error has occurred in retrieving the Web page; and

third instructions for removing the bookmark in response to determining that an error has occurred in retrieving the Web page.
